

Module 6 Assignment
Murat Bayer

Questions of Procedure (established – or one system)

1. What is the size of the basketball court?
2. How many gallons of blood does a heart pump per day?
3. At which degree Celsius and Fahrenheit are equal?

Questions of Preference (no system)

1. What type of movies do you like to watch?
2. Which is better bus or train?
3. Do you prefer season salad or Russian salad?

Questions of Judgment (conflicting systems)

1. Is there any law related to street vendors in India?
2. Who is going to stop this war?
3. Is there any way to stop advertising and encouraging unhealthy foods?

Conceptual Questions

a. What is an example of a simple conceptual question? Why is this conceptual question simple?

How does the audience determine my word choice?

I think this is a simple conceptual question. Because the language of the performance should be determined according to the age group and understanding level of the audience.

b. What is an example of a complex conceptual question? Why is this conceptual question complex?

What is a Game?

I think this is a complex conceptual question because a game can be broadly defined as a structured activity or form of play that typically involves competition, rules, and a specific goal or objective. However, the exact definition can vary based on cultural, social, and individual perspectives. Factors such as the participants, type of game, elements of play, and overall experience all contribute to what makes a game engaging and unique. Ultimately, the concept of a game is dynamic and can encompass a wide range of activities and interpretations.
